

In the claims:

Kindly amend the claims as follows:

Pub B2
A1
1. (Amended) A safety device for a stored-program control, comprising:
a controller for exchanging data with the stored-program control, the
stored-program control being external to the safety device, and for exchanging data, via
a bus system, with a peripheral to be controlled; and
a monitor for monitoring a wake-up signal generated by the stored-
program control and transmitted to the monitor by the controller.

Pub E1
2. (Amended) The device according to claim 1, further comprising a monitor for
monitoring a wake-up signal generated by the stored-program control and transmitted to
the monitor by the controller.

A2 Pub B3
3. (Amended) A safety device for a stored-program control, comprising:
a controller for exchanging data with the stored-program control, the
stored-program control being external to the safety device, and for exchanging data, via
a bus system, with a peripheral to be controlled; and
a monitor for monitoring a wake-up signal generated by the stored-
program control and transmitted to the monitor by the controller.

A3 Pub B3
4. (Amended) A safety device for a stored-program control, comprising:
a controller for exchanging data with the stored-program control, the
stored-program control being external to the safety device, and for exchanging data, via
a bus system, with a peripheral to be controlled; and
